

Civic Exchange Energy Seminar no.10: **THE GREEN PEARL RIVER DELTA - ROLE OF THE POWER SECTOR**

The National Development & Reform Commission (NDRC) has published a wide-ranging Outline Plan for the Reform & Development of the Pearl River Delta 2008-2020. The Plan calls for 'green' development. What are the energy needs of this plan and how may it affect energy policies for Guangdong and Hong Kong? What are the challenges and opportunities for the region going forward, and how should Hong Kong deliberate on all its longer-term implications? What does it take for a jurisdiction to transit to high efficiency, low pollution and low carbon outcomes?

120 delegates attended the Civic Exchange's Energy Seminar on **17 April 2009**. Dr. HU Tao shared with us Mainland China's energy policy in the context of China's response to climate change through a co-control approach that aims to integrate management of GHG emissions with other environmental and resource security concerns; Mrs. Betty YUEN introduced CLP's future plans for lowering emissions and stable energy supplies to Hong Kong; Mr. Andrew Lawson, Mr. Stephen Oldfield, Prof. Bill Barron and Ms. Christine Loh responded to the speakers' presentations and hosted an informative panel discussion with all the audiences.

Presentations and event **photos** are now available:
